

ENGINEERED BELTS "MTS"

EN

PRODUCT BROCHURE

WE ARE MEGADYNE

Megadyne manufactures a full line of power transmission belting solutions for industrial distribution and original equipment manufacturers (OEMs). We are a GLOBAL LEADER in rubber and polyurethane synchronous belts, engineered belts and V-belts with manufacturing plants in Europe, North America, and Asia. We Make Your Business Move!

OUR SOLUTIONS

Our customers are original equipment manufacturers and aftermarket distributors. for whom we deliver a large range of products. Our offering includes thermoset and thermoplastic polyurethane belts. rubber timing and V-belts, flat belts, multirib belts, specialty belts, pulleys, clamping plates, timing bars and complementary products, including custom-made. Megadyne can fully customize the belts with special cover and/or machined modifications to meet any specific customer's requirement: holes, perforations, slots, teeth removal, vacuum countersink, V-quides

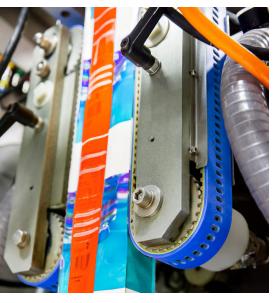

ENGINEERED BELTS ARE NOW AVAILABLE IN STOCK!

That means reduced lead times: our NEW STOCK LINEUP can be quickly picked, packed, and shipped as soon as an order is received.

Customers can receive their special belts in a matter of days, rather than having to wait for production to take place.

Quick delivery allows customers a fast restocking to face downtime on pick seasonal demand, minimizing the risks and being well-prepared.

INDUSTRY APPLICATIONS

VFFS

"Pull Down" synchronous belts are used in form fill and seal machines, bagging machines, and vertical scales for various products from the food, chemicals, and other industries. Products that are packaged are often sweets, potato chips, tea, coffee, cookies or pasta. In most cases, there are two belts located opposite each other over a tube (an equal thickness in the entire coating area is ensured by precise manufacturing). Between the tube and the belt, a plastic wrap, paper or foil, is placed on a metal tube to form a bag, which is then filled and sealed.

The toothed belts often have a counterbore or are provided with longitudinal grooves on the coating side in order to be able to suction and guide the packaging with a vacuum.

The advantage of the toothed belt is that it can be driven with the same synchronous speed on both sides of the packaging guide.

Our NEW STOCK LINEUP has the common sizes of VFFS belts supporting most OEM's.

FEATURES & BENEFITS

- Toothed belt that can be driven with the same synchronous speed on both sides of the packaging guide
- Homogeneous molded covers to provide uniform wear surfaces free of hard spots to increase performance
- Continuous durable wearing covers to provide consistent friction for extended life of the belt
- CNC equipment used to machine holes, slots, grooves, and profiles within precise tolerances for outlasting performance
- Covers without any splices or seams for increased reliability
- Excellent abrasion resistance for an increased trouble-free lifespan
- Excellent flexibility without cracking or tearing

OTHER MARKET SEGMENTS AND RELATED BELTING SOLUTIONS

Corrugated board Folder gluer belts:

Feeder/ Ultrafeed belts (sleeves & finished)

Corrugated belts, various others

Masterflex belt

Top & seam compression belt

Packaging Pull down belts (sleeves and finished)

Horizontal flow packer

Labeling belts Cookie belts

Cable Cable pulling belts

Textile Textile belts
